

## **Aluminium Floor Bunding Installation Guide**

## **WHAT YOU NEED**

- Aluminium Floor Bunding 1200mL with predrilled holes
- 4 x Dynabolts (10 x 75mm)
- Fulaprene sealant tubes
- Caulk gun
- Permanent marker or chalk
- Hammer drill with masonry drill bit
- Fine tooth saw
- Socket set
- Vacuum cleaner or broom

## **INSTRUCTIONS**

- 1. To begin, ensure that the installation surface is clean and free of oil and grease
- 2. Mark out the floor where the floor bund is to be installed with a permanent marker or chalk
- 3. Using the line as a guide, measure the length required for each section of the bund and cut to match. These can be mitred to change direction
- 4. Liberally apply Fulaprene sealant underneath the floor bund and on the ends of each adjoining section
- 5. Place the prepared section of floor bund along the line
- Using the hammer drill and the predrilled holes in the floor bund as a guide, drill a 10mm diameter hole into the floor, approximately 70mm deep. Vacuum away resulting dust.
- 7. Insert dynabolts through the bunding and tighten using the socket set until the top is below the surface in the Aluminium floor bunding
- 8. Run a bead of Fulaprene sealant along the inside edge of the bund to provide a final seal
- 9. Repeat this process until all lengths are in place and the bund has been created.
- 10. Once the sealant is cured, your long term containment solution is now in place for a safer workplace.
