

ABOUT

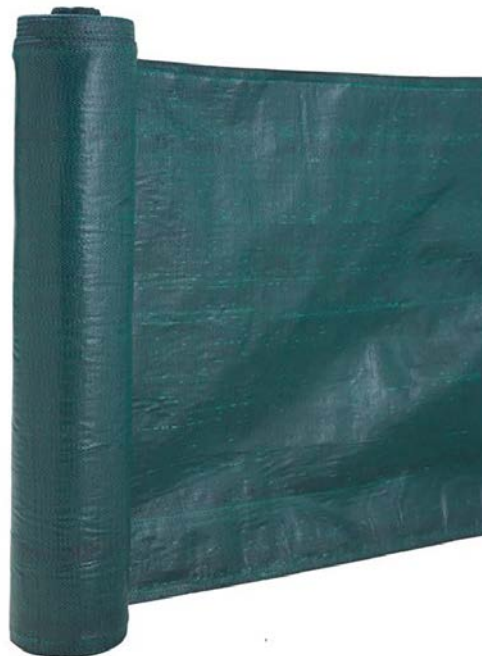

## Silt & Sediment Fence

Stratex Silt Fences are made from heavy duty UV-resistant silt mesh and are designed to reduce soil sediment runoff from building sites. They allow water to filter through the fabric, while suspending soil particles that settle to the ground.

### Ideal Usage

The silt fence is supported by hardwood stakes and is used to surround construction sites and soil stockpiles. This prevents sediment flowing offsite and entering rivers, stormwater drains and sensitive environments. Can be used during earthworks and construction activities for either domestic or civil engineering projects.

- High Quality
- Long Lasting
- Dimensions 870mmH x 100mL
- Stakes & Cable Ties Available

TO ORDER

Code	Description	UOM Qty
SF3000	Silt & Sediment Fence 870mmH x 100mL	Each
TS900-25	Timber Stake 25mmW x 25mmD x 900mmL	Pack/10
