

ABOUT

Double IBC Bunded Spill Pallet

The Stratex Double IBC Bunded Spill Pallet provides a safe and efficient storage solution for hazardous liquids. A low 600mm working height helps to reduce risks during loading and unloading. It also features handy fork pockets for manoeuvrability. Stratex bunded spill pallets are constructed from rotomoulded polyethylene. The rotomoulding process ensures that the bund has consistent wall thickness, delivering superior strength, durability and chemical resistance. The double IBC bund has a safe working load rating of 1250kg.

FEATURES

- Rotomoulded construction provides superior strength, durability and chemical resistance.
- This bund features a low height for ease of use (600mm) Stackable, space saving, innovative, protected design ensures low delivery costs for multiple bunding units.
- Fork pockets for easy movement (Remove IBC and empty spill pallet before moving).
- Optional clip-on dispensing units direct any spills while decanting into the sump, meaning liquids can be retrieved and reused saving time and money.
- All-weather covers for outdoor storage and sump plugs for drainage and spilled liquid recovery available.
- Dimensions: 600H x 1356W x 2322L mm.
- 1250L Sump.
